48OB6 SCALE RELIABILITIES:

For comparison, mean scores and scale characteristics in a sample of 582 college students, collected at the University of Oregon, Fall 2011, is provided. The sample was aged 18-40 (mean = 19.5, SD = 2.2), and was 65% female. Seventy-five percent of the sample identified as non-Hispanic white, 9% as Asian, 4% as African-American, and 2% as American Indian, Alaska Native, or Pacific Islander (10% reported "other" for ethnicity).

VALIDITY INDICATIONS:

In a comparative validity study (student sample, N = 227), the 48QB6 predicted important life outcomes six months after participation (grade point average [GPA] and number of student conduct violations charged and found responsible for), better than all Big Five questionnaires administered (including the NEO-FFI [60 items], IPIP-50 [50 items], BFI [44 items]). See:

^{*} Note that a 1-5 scale was used in this study, rather than the 0-5 scale.
