FACING GLOBAL CHALLENGES —SHAPE GLOBAL FUTURES

Climate change, social inequality, migration, environmental degradation, conflict and rapid technological shifts - our world faces major challenges, often hitting the most vulnerable the hardest.

Our MA program "Global Futures: Development, Sustainability, Social Justice" equips you with the knowledge and skills to analyze these transformations and reflect on pathways for meaningful change.

This interdisciplinary program combines Social Anthropology and Geography with contributions from Area Studies and other disciplines. It prepares you to tackle complex global issues with a critical mindset and a focus on sustainable futures.
