MEDICINE AND THE DIGITAL REVOLUTION

Technology, Data, Knowledge

18-19 December 2014

Center for Medical Humanities

University of Zurich

The last two decades have witnessed the emergence of a series of new technologies of communication. This “revolution,” as many observers termed it, has become possible due to the invention of the personal computer and the construction of the Internet, a large and largely invisible socio-technical infrastructure. The digital revolution has also transformed the world of medicine and public health in significant ways. The conference explores how the digital revolution is changing the daily practice of these fields. It investigates the spaces opened up by new powerful technologies and examines the world of online cultures.

Thursday, 18 December 2014, KO2-F-152

Producing Data – Predicting Events
